

RS & CARE

ZIPPER CLEANING & CARE

Regular cleaning and lubrication helps zippers last the lifetime of the suit. Without proper care (left), expensive zippers degrade and need costly replacement. Keep your wet suit, dry suit, gear bag zippers free of harmful dirt, sand and salt deposits with **Zip Care™** (right).

Untreated

Treated

STEP 1: Unzip item and use **Zip Care's** brush top to remove grit and dust.

STEP 2: Brush **Zip Care** generously onto zipper teeth to clean and lightly lubricate. Wipe off excess.

STEP 3: Carefully open and close zipper to thoroughly distribute **Zip Care**.

Zip Tech™ is preferred for multi-dive lubrication. Use **Zip Tech** to lubricate and protect watertight and airtight zippers on dry suits from corrosion and harmful salt, chlorine and other pollutants. To use: Open zipper and apply **Zip Tech** sparingly only to the outer teeth of the zipper.

If you prefer a paraffin wax and silicone-based lubricant, **Max Wax™** is great for general zipper lubrication. Note: Some suit manufacturers prefer you use silicone free formulas such as **Zip Tech** and **Zip Care**.

Zipper Repair

Broken zipper tooth on a dive gear bag? Stitch the damaged section closed to prevent further separation until you can repair properly or replace.
